Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being obvious over applicant submitted prior art as shown in figures 5-6 [AAPA, hereinafter] in view of Carlson, deceased et al. [US 5,055,071].

Regarding claims 1 and 3, AAPA discloses a fuse element (figure 5) comprising:

- a pair of flat terminal portions for arranged in parallel;
- a fusible portion (5) provided between inner edged of the flat plate terminal portions;
- an insulating housing (2) into which the fuse element is inserted so as to cover the inner edges and upper edge of the flat terminal portions and the fusible portion, the insulating housing including a pair of the housing bodies (2a) mutually connected at upper and thereof so as to form an upper wall portion of the insulating housing and a flap (2b) integrally formed at one side edge of an opening opposing the upper wall portion through a thin walled hinge (8) joined to the other side edge of the opening.

Art Unit: 2841

AAPA discloses disclose the instant invention except for the flap having a distal end edge to be joined to another side edge of the slit opening.

Carlson, deceased et al. disclose a fuse assembly (figures 1-3) having a rotatable flap (14) integrally formed one side edge of the fuse contained a plurality of slit openings (28, 30) and joined/secured to another side edge of the slit openings by means of a locking pawl (15).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the locking pawl design of Carlson, deceased et al. with the flap of AAPA in order to protect the fuse portion.

Response to Arguments

3. Applicant's arguments with respect to claims 1 and 3 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hung S. Bui whose telephone number is (571) 272-2102. The examiner can normally be reached on Monday-Friday 8:30AM-6:00PM.
